Profile

Senior Software Engineer specialising in developing modern and interactive web applications, with a strong curiosity and adaptability across a wide range of technology domains. Proven ability to leverage full-stack expertise to build feature-rich, user-centered websites at scale.

Professional Experience

03/2023 – present
Berlin, Germany

Senior Software Engineer, Miro ⤢

Working as a part of the Canvas Performance team for the Product Miro Board.

11/2021 – 02/2023
Berlin, Germany

Frontent Engineer, Liqid Investments ⤢

- Orchestrated and Completed the design, development of the onboarding flows for our Clients within 9 Months. The Tech stack being React + Typescript, custom Lightning Web Components(LWC) in the front-end and Salesforce as Backend.
- Improved the developer experience by 20% with the complete overhaul of our development workflow by implementing automated pre-commit checks, lint and code formatting fixes, automated testing, thereby improving developer experience.
- Resurrected our documentation system by introducing new structure and methodology of documentation and auto-documentation system.

06/2017 – 04/2021
Chennai, India

Web Application Developer, Zoho Corporation ⤢

Worked as a Product Developer, leading the design and development of new generation Design Collaboration tools on the Web. Experience in working with next-generation javascript, frameworks for the following interactive feature-rich products.

- **Zoho Show** ⤢ - A Google slides competitor, where improved upon and optimised the core rendering engine.
- **Nila** ⤢ - A feature-packed Cloud Design editor, collaboration suite and an upcoming competitor of Figma, where I was one of the lead developers responsible for designing and developing various features required for editing, manipulation of design components. I handled the creation, maintenance and upgrading of client and server facing components, as well as real-time collaboration support for a highly evolving product straight from inception phase to its maturity.
- **Vani** ⤢ - Vani was rapidly designed and developed over 6 months, where I overtook the Inter product content migration among the aforementioned products and porting over various modular components thereby resulting in a quick development of our MVP.
